

New definitions from pp 49-50 (44-5 in new book)

Right angle – an angle with a measure of exactly 90°

Acute angle – an angle with a measure less than 90°

Obtuse angle – an angle with a measure greater than 90°

Vertical angles – two non-adjacent angles formed by two intersecting lines

$\angle 1$ & $\angle 2$ are V.A.
 $\angle 3$ & $\angle 4$ are V.A.

Linear pairs of angles – two adjacent angles that lie on a line

(their non-common rays are collinear)

$\angle AEC$ & $\angle CEB$ are linear pairs
 $\angle 3$ & $\angle 4$ are L.P.

Pair of complementary angles – two angles with measures that have a sum of 90°

$\angle 1$ & $\angle 2$ are Complementary

Pair of supplementary angles – two angles with measures that have a sum of 180° .
